# 1.0 Introduction

## 1.1 Project engagement

During February of 2024, VaporFiteam engaged CTDSec to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. VaporFi provided CTDSec with access to their code repository and whitepaper.

## 1.2 Disclaimer

It should be noted that this audit is not an endorsement of the reliability or effectiveness of the contract, rather limited to an assessment of the logic and implementation. In order to ensure a secure contract that's able to withstand the network's fast-paced and rapidly changing environment, we at CTDSec recommend that Vaporfi team put in place a bug bounty program to encourage further and active analysis of the smart contract.

## 2.0 Coverage

### 2.1 Target Code and Revision

For this audit, we performed research, investigation, and review of the MemeFactory contracts followed by issue reporting, along with mitigation and remediation instructions outlined in this report.

The following code files are considered in-scope for the review:

Source file [commit - a4ef671033533f7db5e719f850edf369dfebf2a5]:

<https://github.com/VaporFi/memefactory-contracts>

Fix version:

Source file [commit - efd5773dbf1468780d86fa2b22f7a7dff26f2647

<https://github.com/VaporFi/memefactory-contracts/pull/10>

## 2.2 Attacks made to the contract

In order to check for the security of the contract, we tested several attacks in order to make sure that the contract is secure and follows best practices.

No	Issue description.	Checking status
1	Compiler warnings.	PASSED
2	Race conditions and Reentrancy. Cross-function race conditions.	PASSED
3	Possible delays in data delivery.	PASSED
4	Oracle calls.	PASSED
5	Front running.	PASSED
6	Timestamp dependence.	PASSED
7	Integer Overflow and Underflow.	PASSED
8	DoS with Revert.	PASSED
9	DoS with block gas limit.	PASSED
10	Methods execution permissions.	PASSED
11	Economy model. If application logic is based on an incorrect economic model, the application would not function correctly and participants would incur financial losses. This type of issue is most often found in bonus rewards systems, Staking and Farming contracts, Vault and Vesting contracts, etc.	PASSED
12	The impact of the exchange rate on the logic.	PASSED
13	Private user data leaks.	PASSED
14	Malicious Event log.	PASSED
15	Scoping and Declarations.	PASSED
16	Uninitialized storage pointers.	PASSED

17	Arithmetic accuracy.	PASSED
18	Design Logic.	PASSED
19	Cross-function race conditions.	PASSED
20	Safe Zeppelin module.	PASSED
21	Fallback function security.	PASSED
22	Overpowered functions / Owner privileges	PASSED

## 3.0 Security Issues

### 3.1 High severity issues [Acknowledge]

#### 1. Reentrancy attacks

**Contract:** MemeFactory

**Functions:** launch(), unlockLiquidityTokens(), transferLock()

**Issue:** The functions launch(), unlockLiquidityTokens(), transferLock() are exploitable by re-entrancy attacks.

**Fix:** Add nonReentrant guard modifier.

**Dev team:** Team confirms that there is no risk of reentrancy.

### 3.2 Medium severity issues [Not apply]

#### 1. Unlimited fees

**Contract:** MemeFactory

**Functions:** setLaunchFee()

**Issue:** The fees do not have any set limit, allowing if they are set wrong the contract can become a honey pot or have abusive conditions if the limit is set to 100%.

**Fix:** We recommend adding a limit to 10-15%.

**Dev update:** Fee is fixed to 250 USDC.

## 3.3 Low severity issues [FIXED]

### 1. Zero address Validation Missing

**Contract:** MemeFactory

**Function:** setVaporDEXAdapter()

**Fix:** Check to implement validations in order to verify that the address is not the zero address (0x0) in vaporDexAdapter.

## 4.0 Testing coverage - python

During the testing phase, custom use cases were written to cover all the logic of contracts in python language. *\*Check “5 Annexes” to see the testing code.*

## 6.0 Summary of the audit

High and medium vulnerabilities were found during the audit process, after a review by the development team contract is safe to be deployed.

Vulnerability Level	Total	Pending	Not Apply	Acknowledged	Resolved
High	1			1	
Medium	1		1		
Low	1				1
Informational	0
